

Free Pattern - Steer Skull

1. Have a copy shop enlarge the pattern to desired size.
2. Pin the pattern onto a piece of foam and trace over the lines in the pattern hard enough to leave an indentation in the foam.
3. Cut the skull out of the foam using the HWFF Hot Knife (any size) or Scroll Table.
4. Contour the edges of the skull with the Sculpting Tool if desired. You can also smooth out the surfaces with sandpaper if you wish.
5. If you'll be painting the skull, use water-based paints. You could also hard coat the entire project with Foam Coat.
