

Introducing the Hot and Taut

Sculpting Tool Wire Tensioner

The Sculpting Tool Wire Tensioner holds the cutting wire taught when you don't need to shape the wire or loop it outward for sculpting negative cuts. Now you can easily do freehand scroll cutting.

INSTRUCTIONS

First snap the plastic wire tensioner in place. The nuts that hold the arms in place should stick slightly into the holes in the tensioner. Now press the brass arms securely into the half rounds in the tensioner. Mount the cutting wire on one arm, then pull the arms together just enough to create tension on the wire while attaching onto the other arm.
